

Hi Ron,

I'm following up regarding our phone conversation on September 30. I've summarized, below, the traffic counts that the Bureau of Transportation Engineering & Operations (TE&O) collected along S. Barton St and 16th St S in both 2011 and 2016 in your civic association. Along both streets, the counts showed a decrease in traffic volumes from 2011 to 2016, but a slight increase in travel speeds. Roadways in Arlington County with average daily traffic (ADT) volumes under 1,500 vehicles per day are considered low-volume streets.

Table 1 – S. Barton St Counts Obtained 500' North of 16th St S

	May 2011 Counts	April 2016 Counts
85 th Percentile Speed	30.5 mph	33.0 mph
Median Speed	25.5 mph	25.5 mph
Average Daily Traffic (ADT)	822 veh/day	785 veh/day

Table 2 – 16th St S Counts Obtained 500' West of S. Barton St

	May 2011 Counts	April 2016 Counts
85 th Percentile Speed	26.3 mph	27.9 mph
Median Speed	19.9 mph	21.7 mph
Average Daily Traffic (ADT)	1,042 veh/day	780 veh/day

Michelle Stafford, copied on this email is the new [Neighborhood Complete Streets \(NCS\) Program](#) manager. Please contact her for the protocol on how you can nominate the Columbia Heights Civic Association's traffic calming/missing sidewalk project requests for consideration in the new NCS program.

Lastly, the two (2) speed humps along S. Cleveland St between Columbia Pike and 13th St S that were removed when the street was re-surfaced in June are scheduled to be put back on Friday or Monday, weather permitting.

Thank you,

Jon Lawler, P.E.
Capital Project Manager
